Melting of Slag

Separation of Iron particles from molten slag

**To separate Fe particles from molten slag,
Viscosity of molten slag is a Key !**

How to evaluate viscosity of molten slag made of Lunar soil ???

Output

e.g. Viscosity
of Multi-component
Molten Slag

- **Linear regression ?**
- **Logarithm ?**
- **Exponential ?**

**Neural
Network
Computation**

Output Input Parameters

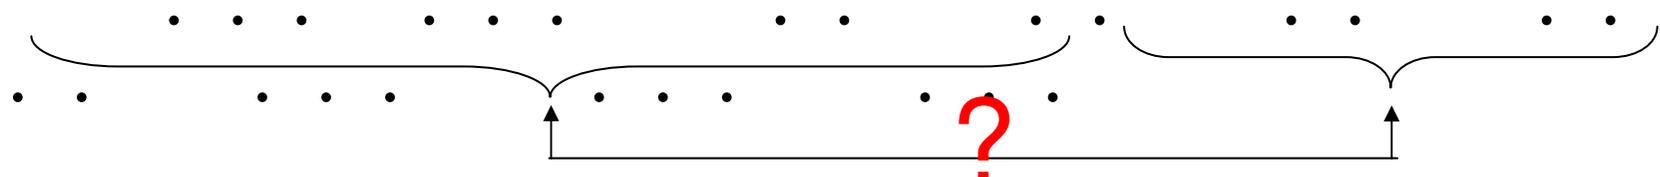

$$a_k = f \left(\underbrace{\sum_{i=1}^n x_i \cdot W_{ki} - W_{k0}}_{\text{Parameters}} \right)$$

Fundamental function: $f(x) = \frac{1}{1 + e^{-\eta \cdot x}}$
