Thermodynamic calculations with a low threshold:

Excel worksheets, 3D phase diagrams, and other educational tools

Sander Arnout, Els Nagels GTT workshop 2011

INS

Overview

- Vision
- Excel worksheets
 - Fe-alloy phase calculation
 - Lead battery recycling charge calculation
- Whiteboard
- 3D phase diagram printing
- Conclusions

InsPyro

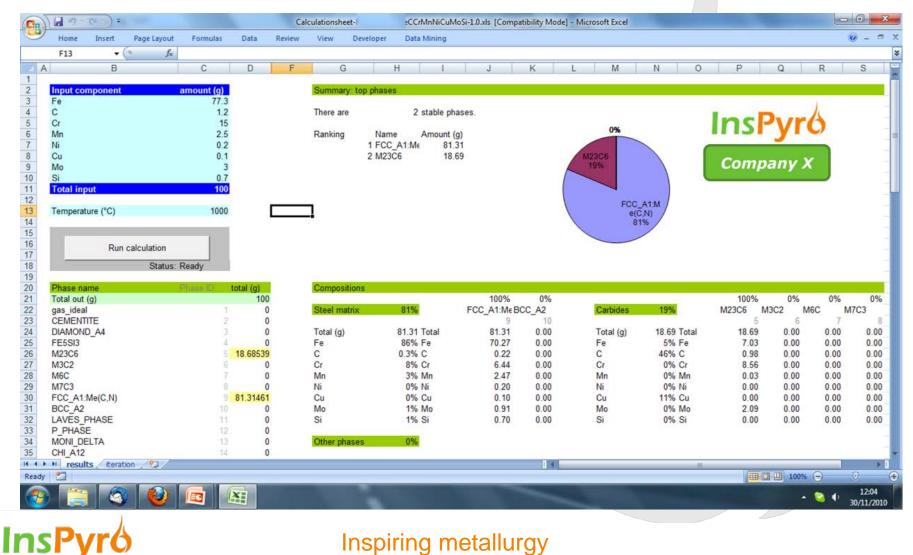

Vision

- Thermodynamics are powerful
- However, (even) FactSage is not so user friendly:
 - Selection of phases:
 - Overlapping databases/models
 - Metastability
 - Missing compounds or components
 - Updates
 - Own logic of calculation set-up
- Metallurgy and related industry need simpler way to access complicated models
- + All help to understand phase diagrams is welcome

InsPyro

Excel calculation sheets

Example 1: Fe-alloy

Excel calculation sheets

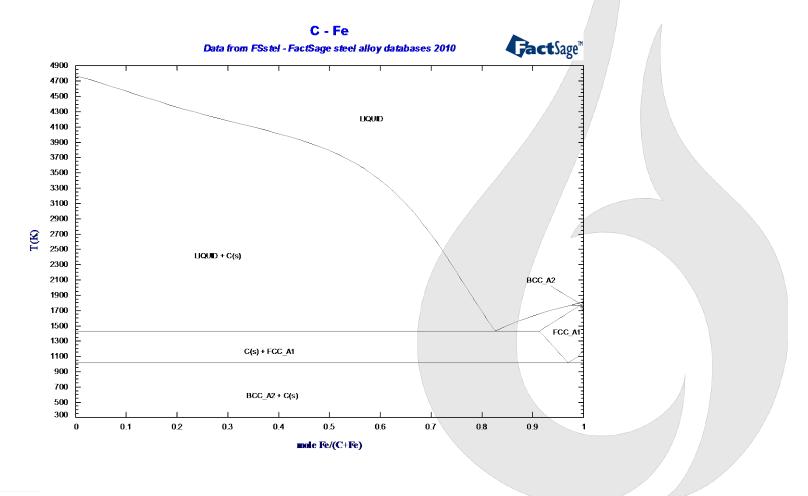

Example 2: Lead recycling

InsPyr

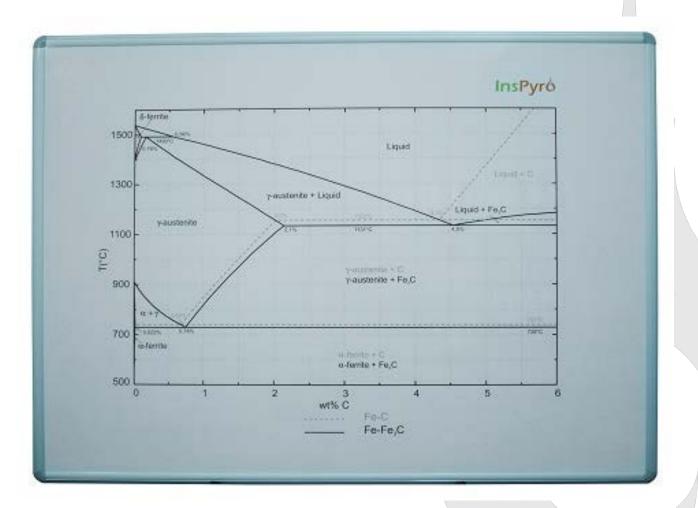

Phase diagram whiteboards

A classic: the Fe-C diagram

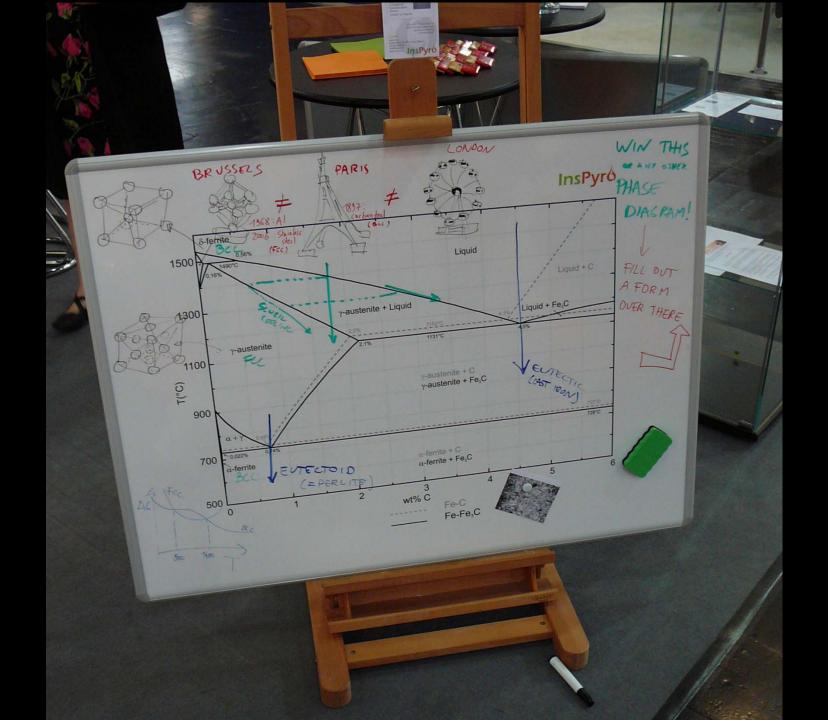

InsPyro

Put it on a whiteboard...

... and it comes to life!

InsPyro

3D phase diagrams

- Liquidus projections can be difficult to imagine at first
- 3D examples used in education are helpful, but mainly for theoretical, ideal systems
- With a real system, it can be a discussion tool as well (and an eye catcher)

Rapid manufacturing techniques can produce any shape – so why not a phase diagram?

Ag-Pb-Zn ternary liquidus projection

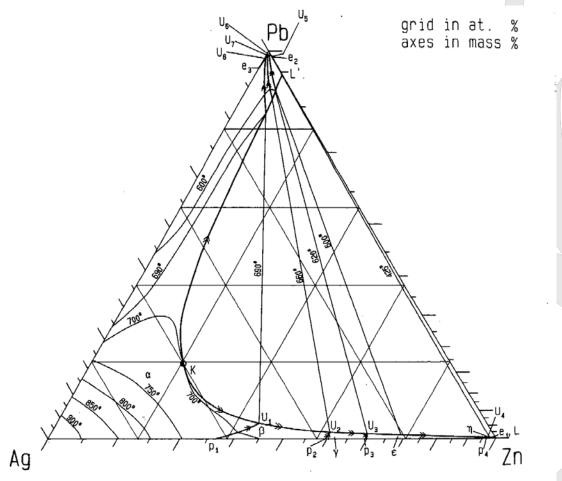

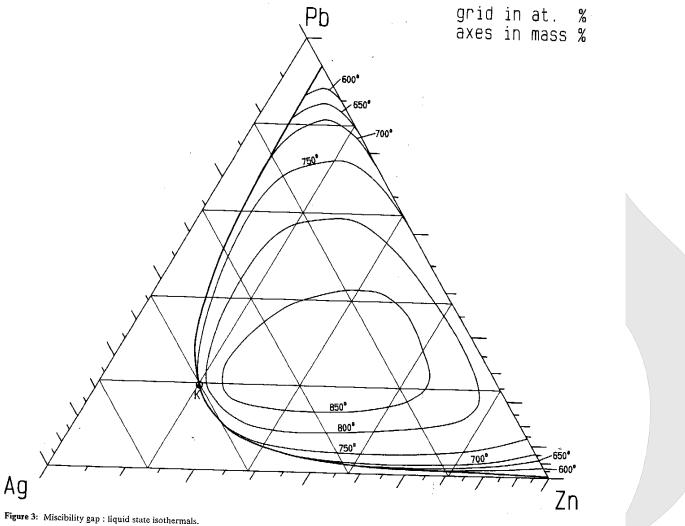

Figure 2: Liquidus surface and tie lines (miscibility gap).

Kubaschewski

InsPyro

Ag-Pb-Zn miscibility gap

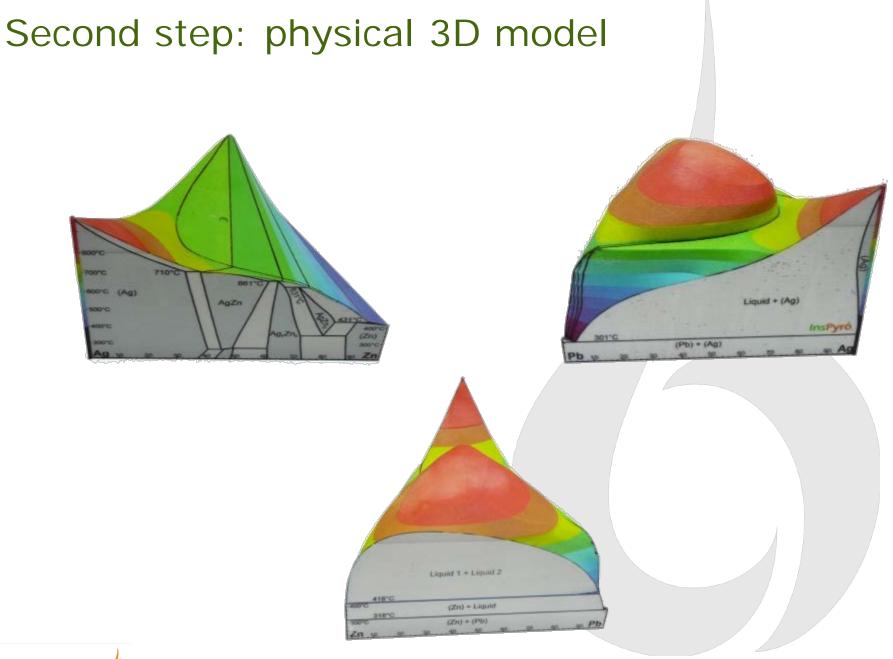

InsPy

First step: digital 3D model

<u>3D model</u>

InsPyro

Improvements

- Vertical and horizontal sections
- Phase volume puzzle
- Transparency?
- Improved smoothness
- 3D modelling from the Gibbs energy models?

Conclusions

- Using well-known spreadsheets to make thermodynamics easier...
 - Point calculations for stable phase in alloy
 - Simple effect of composition or T influences
 - Integrate in charge calculation
- Using new techniques to make thermodynamics tangible...
 - Writable whiteboard of any system
 - Full colour 3D print of any system
- InsPyro always tries to simplify the answer, without simplifying the question!

InsPyro
