- **Conclusions**

Introduction

Context of the study:

Increasing demand for wood pellets in combustion processes

→ Enlarge the market to other biomass feedstock such as agricultural or forestry residues

Wood

Ash content : ~ 1%

Ash main components : SiO_2 · CaO · K_2O

Agricultural waste Fuel

Ash content : 2-15%

Ash main components : SiO_2 · CaO · K_2O + P_2O_5 - MgO
Cl, S and N higher content than in wood

Use in combustion problematic:

- Fooling ⇒ Cleaning
- Particles ⇒ Filter
- NOX ⇒ Dedicated treatment
- Ash melting and slagging ⇒ Additive

**Proposed solution:
blend biomass**

Introduction

Context of the study:

Classical methods used in Industrie to blend

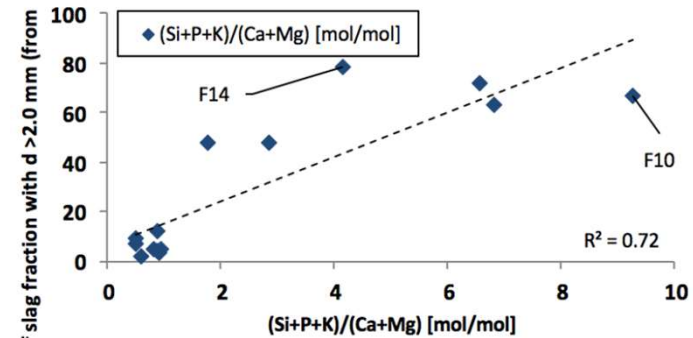

Ash melting test

Expensive
Reproducibility
Necessity for each biomass and for each mixture.

...

Fuel indexes

Easy to use but empirical approach,

Proposed method:

Physico-chemical predictive tools assuming thermodynamic equilibrium is reached

- Introduction
- **Biomass selection**
- Methods
- Results
- Conclusions

2 biomasses selected with criteria

- Agricultural or forestry residues
- Large amount available
- Adapted for biomass transformation
- One main inorganic element (**Ca** or **Si** or **K**)

Wheat straw

Oak Bark

	Wheat straw	Oak bark
% db Ash 550°C	6,30	8,40
% SiO ₂	33,7	12,2
% CaO	6,5	42,6
% K ₂ O	27,4	3,7
% P ₂ O ₅	2,4	0,9
% Al ₂ O ₃	0,1	1,7
% MgO	1,2	1,4
% Fe ₂ O ₃	0,2	0,6
% SO ₃	2,7	0,7
% CO ₂	17,2	36,3
% Na ₂ O	0,4	0,2
% MnO ₂	0,1	1,3

- Conclusions

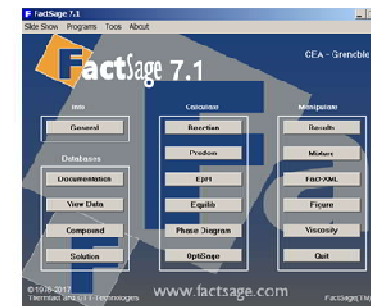

1- Simplified approach by phase diagram

- 3 major oxides of most biomass ashes are CaO, SiO₂ and K₂O
- Give a first estimation of the occurrence of liquid at a given temperature (De Fusco et al. 2016)
- Blend in high melting point compounds area (solid area in green)

2- Factsage approach with

- 3 databases (FactPS, GTOX oxides, FTSalt)
- 15 elements CHONSCiCaSiPMgNaAlFeMn and atmosphere (air)

L. De Fusco, F. Defoort presented in Venice 2016 6th international symposium on energy from biomass and waste 14-17/11/2016

METHODS: Experimental approach

Compressed ash chips  → favour chemical reactivity

Lab scale
Ash test
6h 1000°C
annealing/quench
XRD SEM-EDX

Compressed biomass pellets  → reality

Lab scale
Pellet test
1h 1000°C
XRD

Pilot test
Boiler
XRD

RESULTS: prediction by phase diagram

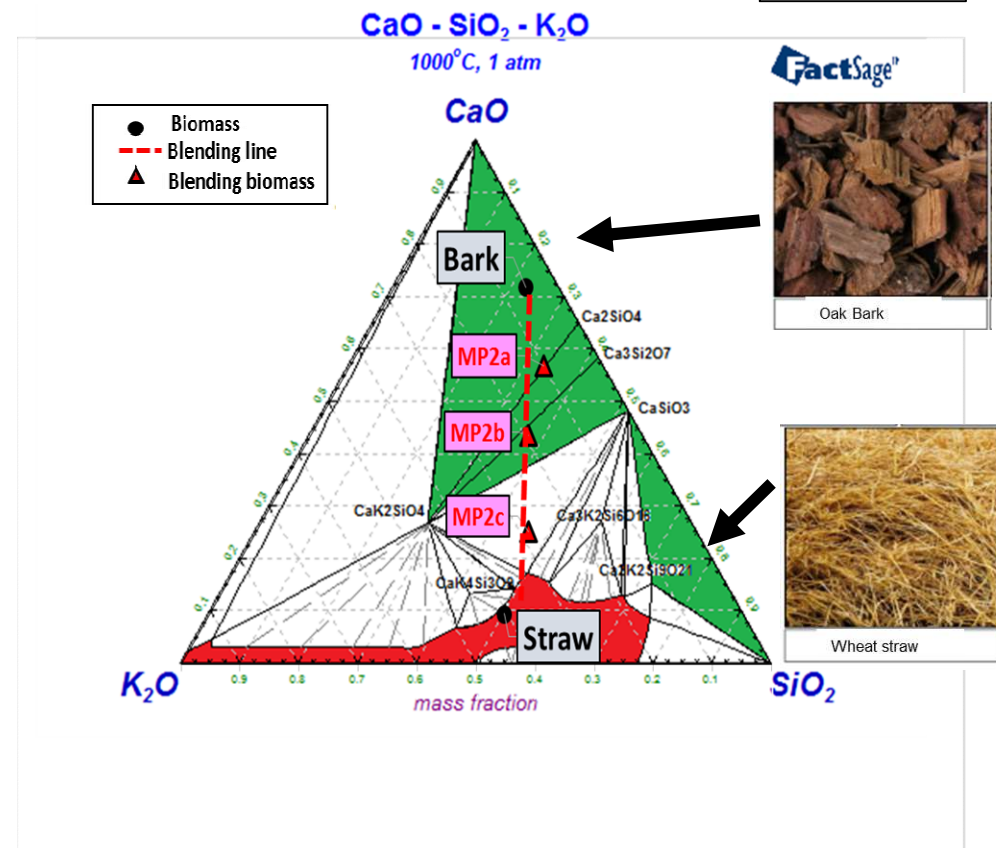

Wheat straw / Oak bark blend

100% liquid

100% solid

sol. + liq.

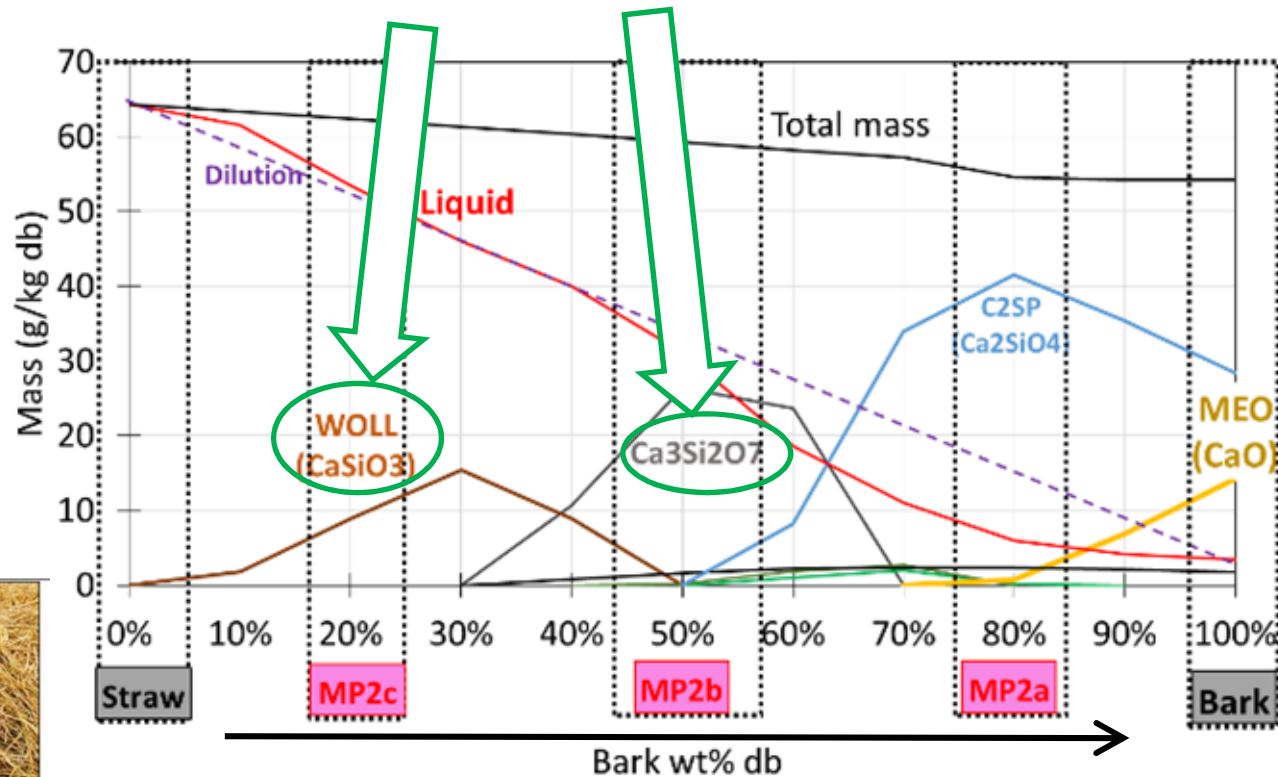

Biomass mass fraction (wt% d.b.)	Oak bark	
Oak bark	100%	Solid
MP2a	80%	Solid
MP2b	50%	Solid
MP2c	20%	Solid+Liquid
Wheat straw	0%	Liquid

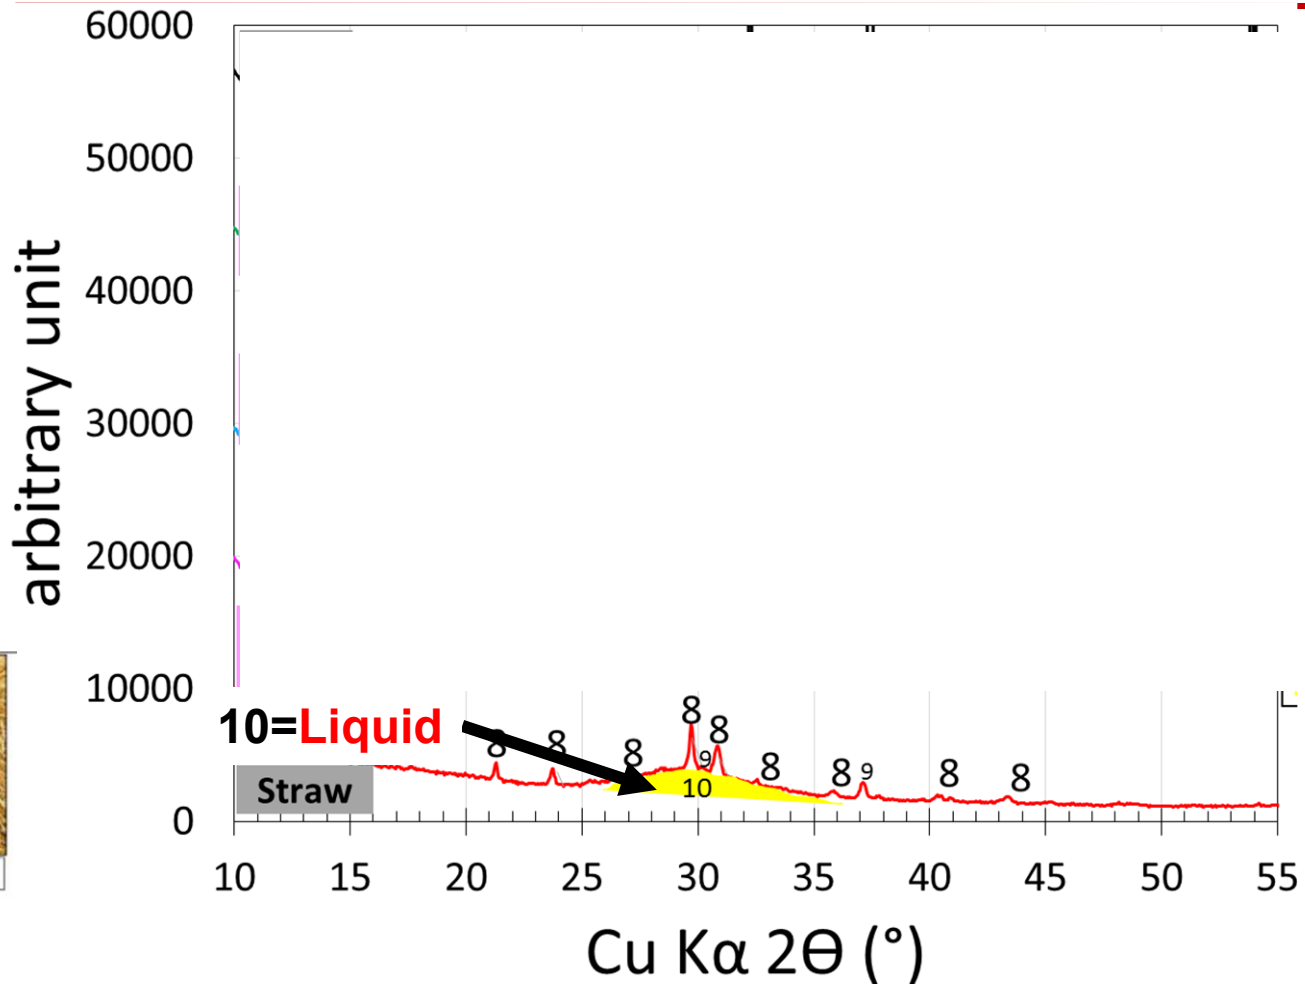

RESULTS: prediction by Factsage

Wheat straw / Oak bark blend

→ Apparition of new solid phases in blend not existing in single biomass (CaSiO_3 , $\text{Ca}_3\text{Si}_2\text{O}_7$)

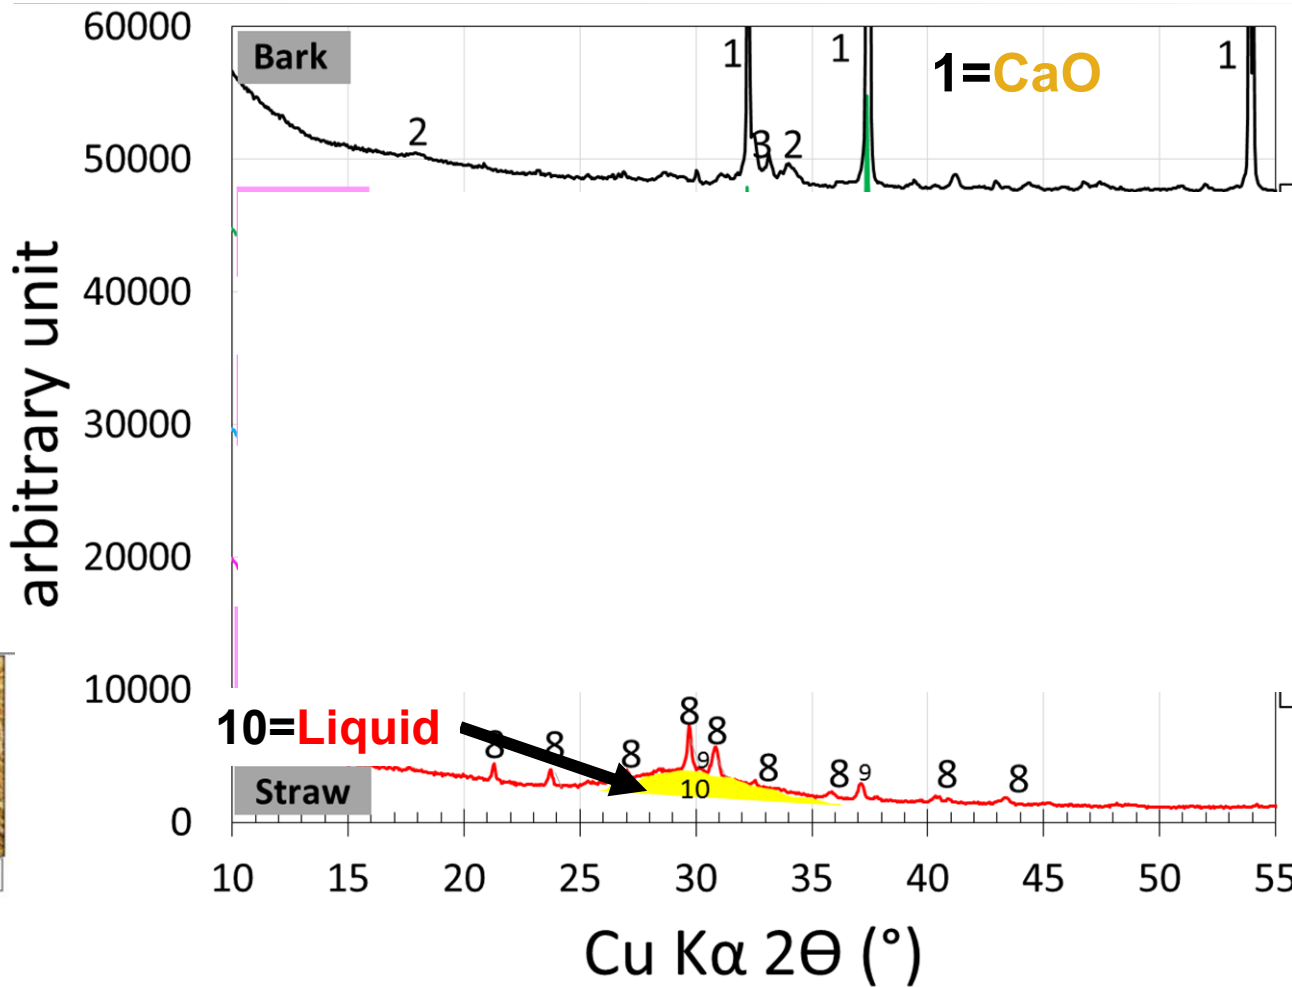

RESULTS: experiments → XRD

RESULTS: experiments → XRD

Oak Bark

Oak Bark

Wheat straw

RESULTS: experiments → SEM-EDS

Good agreement with XRD

Where is this ternary $K_2Ca_6Si_4O_{15}$ phase in the phase diagram?

1000°C, 1 atm

GTT/FZJ GTX database

Phase found

- By Arroyabe 2009 and Chen 2016
- in ash of 50% Bark mixture with wheat straw

Discussions

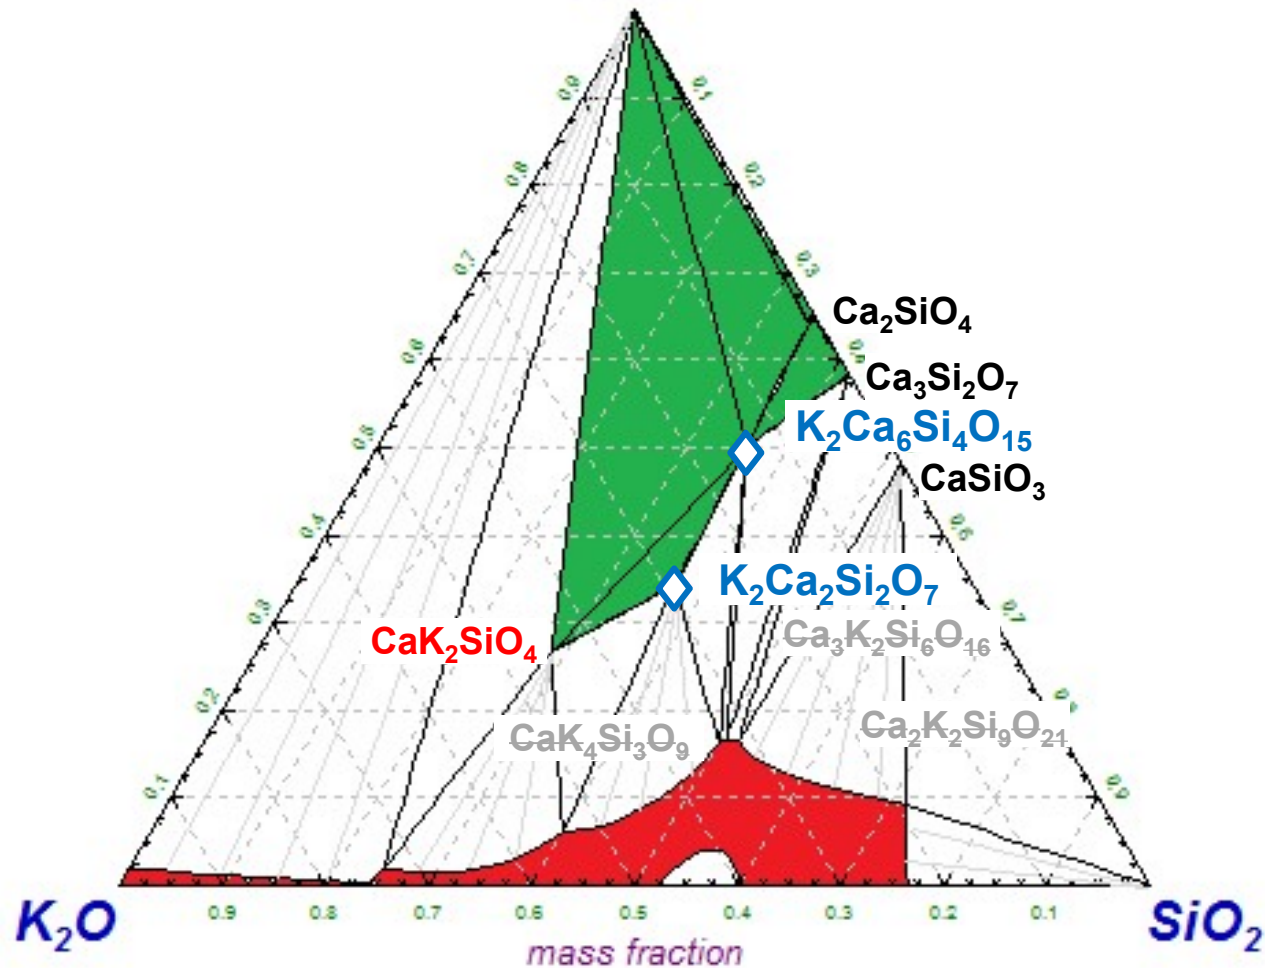

Where is this ternary $K_2Ca_6Si_4O_{15}$ phase in the phase diagram?

1000°C, 1 atm

CaO

FToxid 73 database

Conclusions about $K_2Ca_6Si_4O_{15}$

- Not observed by the 1930 studies related to the CaO-SiO₂-K₂O system (Morey)
- Observed
 - By Arroyabe in 2009 (crystal structure) → exist in XRD database
 - By Chen in 2016 in a phase equilibria study (melting point >1150°C)
- Not clearly observed yet in biomass ash → First time clearly observed in this study
- Many new ternary phases observed by XRD studies for several applications (magma studies, fertilizers, etc) linked with carbonates
- Very recently included in Ftoxid 73 database along with several ternary compounds like GTT/FZJulich/GTOX database
 - But only estimated thermodynamic data !
 - **Need reliable data from experiments** (calorimetry, DSC, etc) **or calculations** (ab initio) to determine $\Delta H_f^\circ(298K)$, $S_f^\circ(298K)$, $C_p(T)$
 - Projects ongoing:
 - France (OPALHE project with Simap Grenoble)
 - Germany (FZ Julich), Austria (U of Innsbruck)

Thank you for your attention ! Any questions ?

The French Carnot Institute is thanked for the financial support of this study (Palissandre project)
Benoît Fer is thanked for its work during its intership
